

A New Technology For Flare Mitigation

Crusoe Energy Systems Inc.

Cully Cavness

Co-Founder, President and COO

200-500 million cubic feet of gas flared daily in North Dakota

The Digital Flare Mitigation Solution

- Crusoe converts “stranded” natural gas into electricity for energy-intensive computing at the well site
- Digital Flare Mitigation[®] solves critical regulatory and environmental challenges for oil and gas companies by achieving beneficial use, reducing flaring and reducing emissions

Crusoe’s Objective: help operators solve the regulatory and environmental challenges of stranded and uneconomic gas

Why Digital Flare Mitigation?

- ✓ Modular design allows for rapid turnkey deployment and mobilization
- ✓ Highly scalable up to many mmcf/d
- ✓ High reliability with few failure points

Digital Flare Mitigation

Stranded Gas

Power Generation

Energy-Intensive Computing

Remote Networking

- The Digital Flare Mitigation® system is a mobile and modular assembly of power generation, computing and remote telecommunications components optimized specifically for stranded gas resources
- Designed for portability, rapid commissioning, rugged oilfield conditions and modular scalability

Easy Integration, Compact Footprint

Step 1: Connection Point

Operator provides simple manifold and valve to existing gas line
Typically, manifold directly onto line leading to flare

1-2 Days

Step 2: Generator

Crusoe provides generator system, delivered on portable trailer or skid

1 Day

Step 3: Compute Module

Computing modules delivered by truck
Satellite antennae installed and aligned after delivery

1-5 Days

Step 4: Startup

Computers connected to generator
Generator start up
Flare becomes back-up gas plan

1 Day

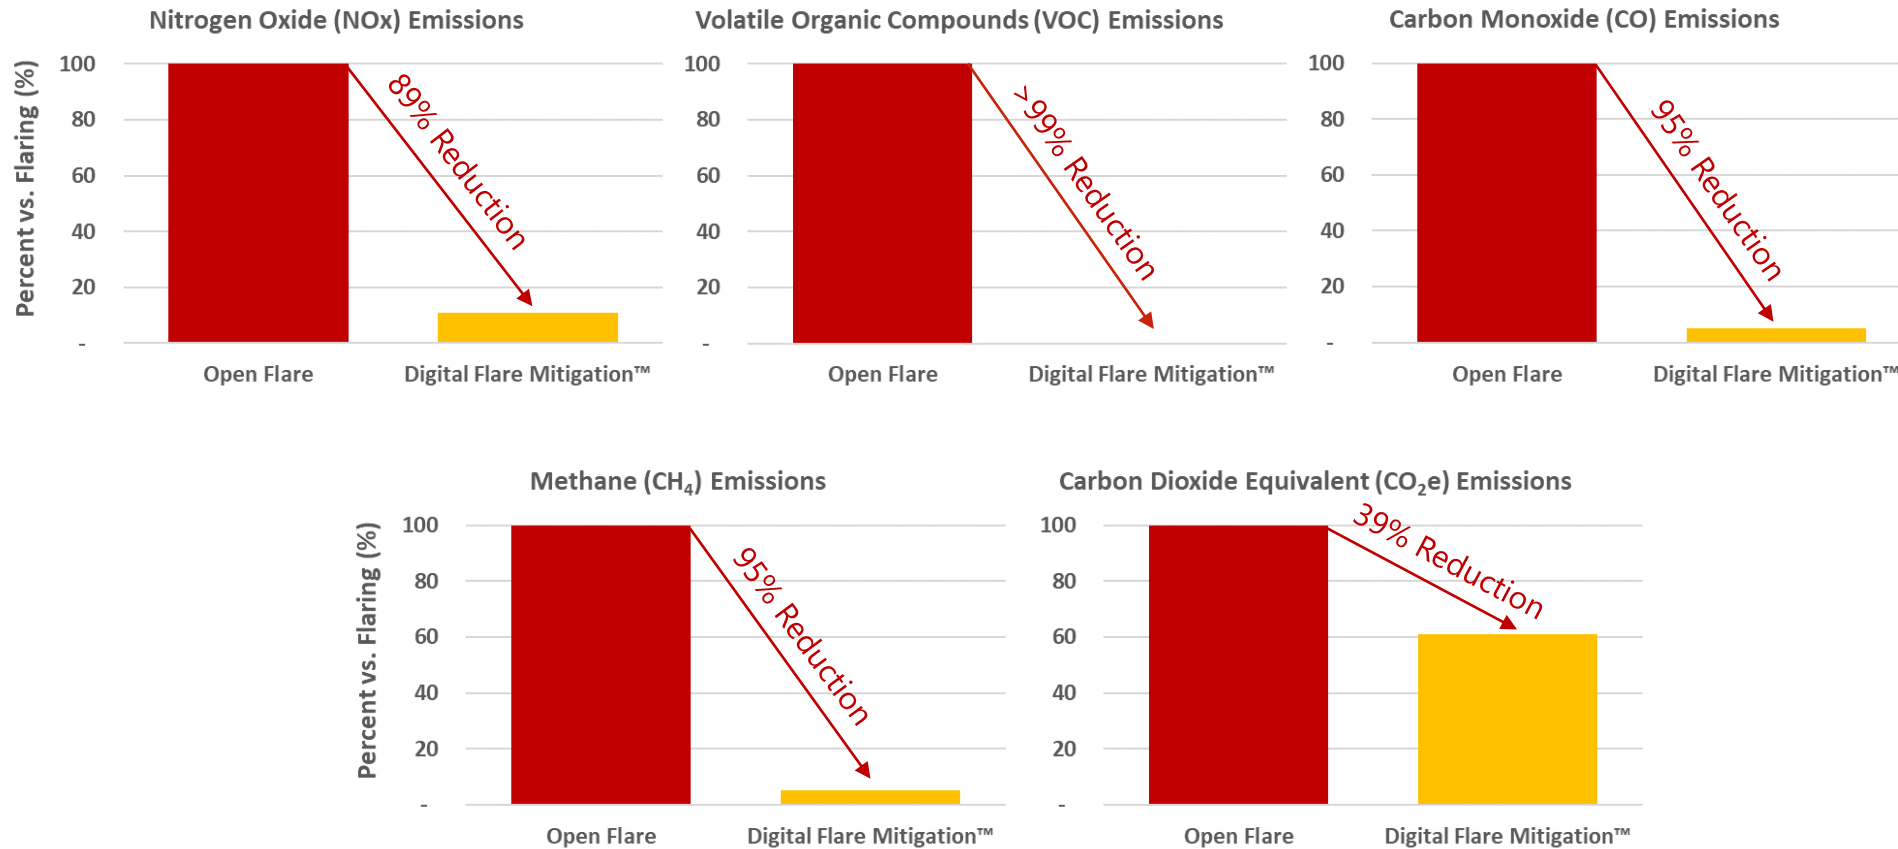

Site Diagram w/Skid Generators

900 Mcfd total: each 300 Mcfd package requires 50' x 75'

Crusoe Reduces Emissions

- Relative to flaring, Crusoe's Digital Flare Mitigation[®] technology achieves deep reductions in emissions of methane, volatile organic compounds (VOCs), nitrogen oxides (NOx), carbon monoxide (CO), smog-forming compounds and CO₂-equivalent greenhouse gasses.

Crusoe Digital Pipeline™ Architecture

Satellite: 40+ connections, redundant satellites

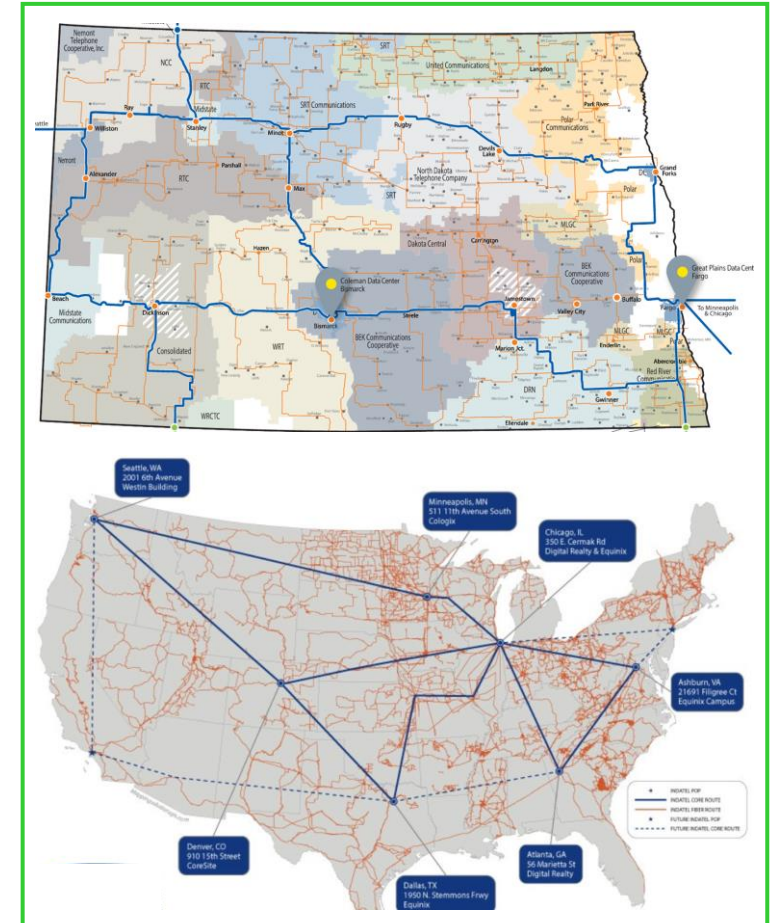

30 to 100 Mbps, ~600ms latency

Wireless: hybrid microwave and millimeter wave

150 to 600 Mbps, <10ms latency (1-way)

Fiber: combining private and public circuits

1 to 10 Gbps, <10ms latency (1-way)

Use Cases for Digital Flare Mitigation[®]

Existing Flare Gas

Scalable gas-capture alternative for producing wells that are currently flaring

USE CASES

- ✓ Producing wells without midstream infrastructure
- ✓ Delayed pipeline arrival
- ✓ Extended gas plant downtime
- ✓ Pipeline capacity challenges

Development Flexibility

Gas offtake plan for future wells to be drilled outside existing infrastructure

USE CASES

- ✓ Drilling exploratory or step-out wells ahead of pipeline build
- ✓ Satisfy expiring leases outside of existing infrastructure service areas

Case 1: Right-of-Way Issues

Topography

Badlands and other natural features have caused midstream challenges for years

Surface Owner Challenges

Inability to get Right-of-Way agreement for some gathering systems or pipelines

Severe topography has no impact on DFM effectiveness

Digital Flare Mitigation[®] :

- ✓ Alternative gas solution if traditional infrastructure is delayed or not available
- ✓ Allows for development and production from otherwise stranded areas

Case 2: Midstream Constraints

- Constraints in compression or processing capacity can leave a well without gas takeaway for extended time periods

Extended Gas Processing Plant Downtime

Interruptible Gas Contracts

Compressor Station Issues

Downstream Capacity Limits

Digital Flare Mitigation[®] :

- ✓ Allows operator to continue producing oil despite midstream constraints while preventing regulatory or emissions violations
- ✓ Operates reliably and independently of downstream infrastructure availability

Case 3: Exploration Wells & Delineation

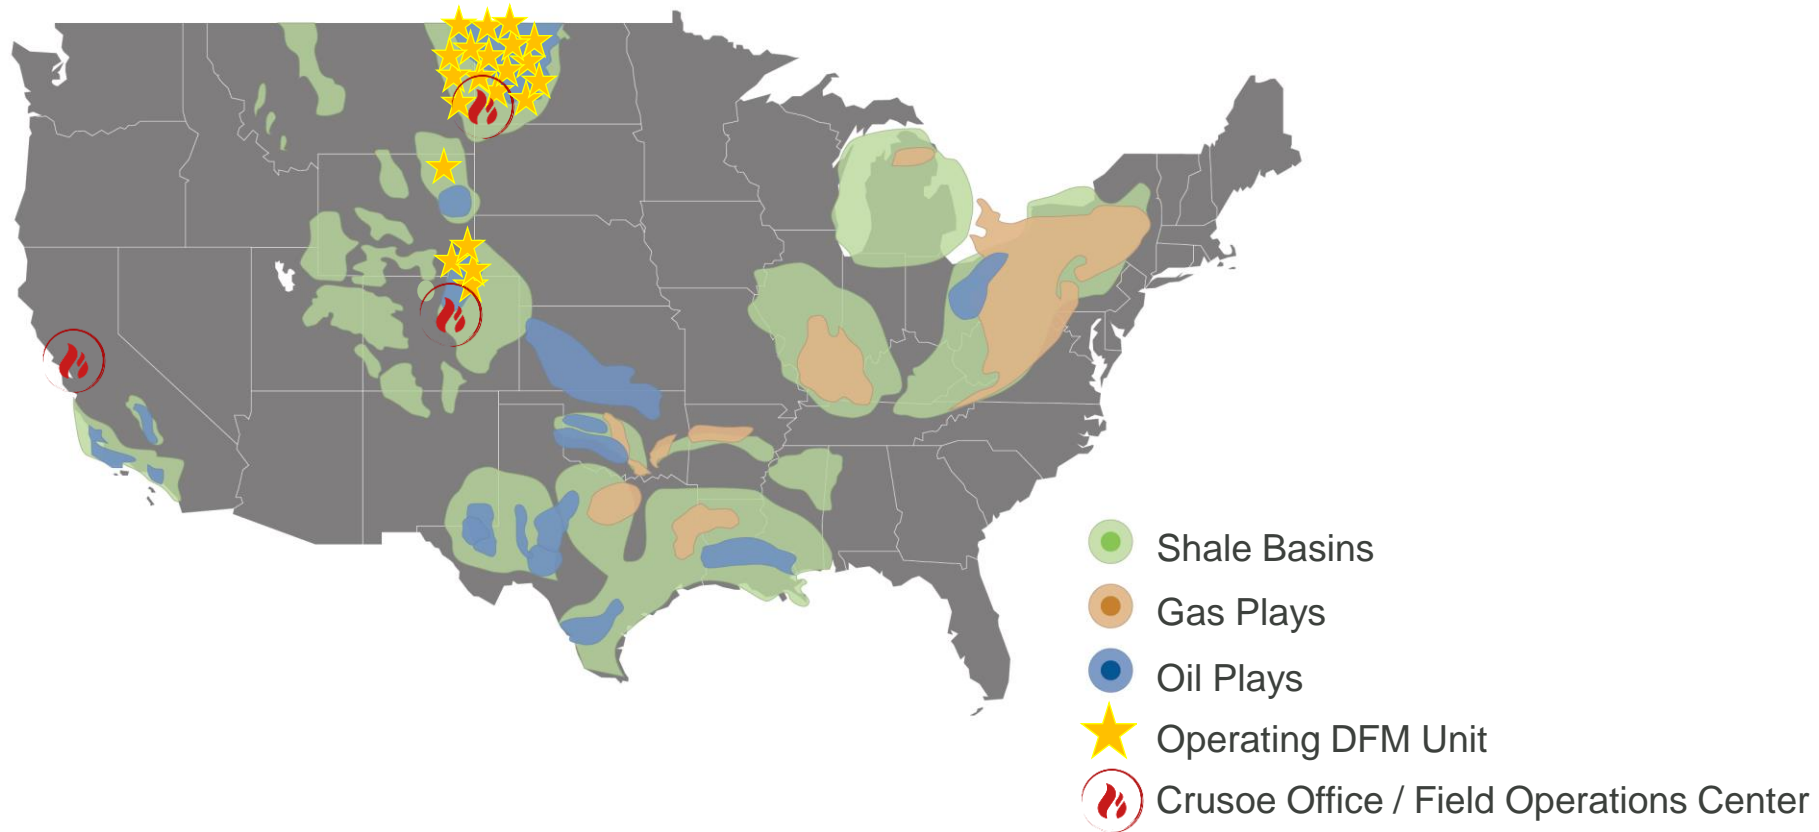

Digital Flare Mitigation[®] :

- ✓ Prevents flaring while evaluating performance of exploration wells
- ✓ Allows operator to more quickly and flexibly delineate acreage position
- ✓ Easy mobilization allows DFM to act as stop-gap prior to arrival of pipeline

Focused on the Bakken

- Crusoe's primary area of operations is the Bakken, with additional activity in the Powder River Basin and Denver Basin. We are proud to employ a large and growing staff in our Williston operations center.

Crusoe's Background

- **Operating since 2018**
 - 38 Digital Flare Mitigation® systems operating in Powder River Basin (WY), Williston Basin (ND and MT) and DJ Basin (CO and WY)
 - Ongoing simultaneous multi-basin operations
 - Operations centers in Williston, ND and Aurora, CO
- **Only one minor recordable safety incident in company history**
- **Approved MSAs with multiple publicly traded oil and gas companies**
 - ISN & PEC third party verification of safety procedures and training policies
- **Crusoe consults with leading regulatory and permitting firms to ensure compliance and positive stakeholder engagement**
- **Operations & business development teams assembled from high-quality E&P and service companies including:**

CRUSOE OPERATIONS TEAM

Ken Parker, VP Facilities Engineering, Operations & Safety Manager

- 25 years of midstream, compression and facilities experience domestically and internationally
- Lifetime safety record: EMR of 0.2 vs. industry average of ~0.6-2.0

Debbie Meeks, Williston Basin Operations Manager

- 35 years of gas-powered engine and generator experience for upstream and midstream companies

Travis Rynestad, Lead Electrician

- Master electrician with 25 years of oilfield electrical systems experience

Nick Corredor, Deployment Manager

- Field operational leadership roles within hydraulic fracturing service companies

Total field operations staff of more than 25 individuals provides reliable and continuous support throughout multiple basins

Senate Bill 2328

- **Creates an extraction tax credit to reduce flaring with Onsite Flare Mitigation Systems**
 - Capped at \$6,000 per well per month
 - Maximum of 12 months
 - Sunsets in 2023
 - Language prevents abuse and ensures that pipelines will continue to be first resort
- **Helps operators overcome installation costs of flare mitigation systems**
 - Piping and plumbing gas lines, valves, etc.
 - Dirt work
 - In the current environment, many operators can't justify even modest capex unless there is a clear near-term return
- **Generates many economic benefits for ND, often in excess of the cost of the tax credit**
- **Attracts a new industry to North Dakota: high performance data centers**
 - Jobs, skills and training that people are excited about
 - Supports service industries (electrical, logistics, roustabout, fabrication, dirt work, suppliers)
- **Proactive move ahead of potential legislation from new administration in Washington**
- **In line with state's goals to reduce waste and flaring and protect the environment**
